

YOUR HEALTH INFORMATION PRIVACY RIGHTS

Most of us feel that our health information is private and should be protected. That is why there is a federal law that sets rules for health care providers and health insurance companies about who can look at and receive our health information. This law, called the Health Insurance Portability and Accountability Act of 1996 (HIPAA), gives you rights over your health information, including the right to get a copy of your information, make sure it is correct, and know who has seen it. **Get It.** You can ask to see or get a copy of your medical record and other health information. If you want a copy, you may have to put your request in writing and pay for the cost of copying and mailing. In most cases, your copies must be given to you within 30 days. **Check It.** You can ask to change any wrong information in your file or add information to your file if you think something is missing or incomplete. For example, if you and your hospital agree that your file has the wrong result for a test, the hospital must change it. Even if the hospital believes the test result is correct, you still have the right to have your disagreement noted in your file. In most cases, the file should be updated within 60 days.

Know Who Has Seen It. By law, your health information can be used and shared for specific reasons not directly related to your care, like making sure doctors give good care, making sure nursing homes are clean and safe, reporting when the flu is in your area, or reporting as required by state or federal law. In many of these cases, you can find out who has seen your health information. You can: **Learn** how your health information is used and shared by your doctor or health insurer. Generally, your health information cannot be used for purposes not directly related to your care without your permission. For example, your doctor cannot give it to your employer, or share it for things like marketing and advertising, without your written authorization. You probably received a notice telling you how your health information may be used on your first visit to a new health care provider or when you got new health insurance, but you can ask for another copy anytime. Let your providers or health insurance companies know if there is information you do not want to share. You can ask that your health information not be shared with certain people, groups, or companies. If you go to a clinic, for example, you can ask the doctor not to share your medical records with other doctors or nurses at the clinic. You can ask for other kinds of restrictions, but they do not always have to agree to do what you ask, particularly if it could affect your care. Finally, you can also ask your health care provider or pharmacy not to tell your health insurance company about care you receive or drugs you take, if you pay for the care or drugs in full and the provider or pharmacy does not need to get paid by your insurance company.

PRIVACY, SECURITY, AND ELECTRONIC HEALTH RECORDS

Your health care provider may be moving from paper records to electronic health records (EHRs) or may be using EHRs already. EHRs allow providers to use information more effectively to improve the quality and efficiency of your care, but EHRs will not change the privacy protections or security safeguards that apply to your health information. EHRs and Your Health Information EHRs are electronic versions of the paper charts in your doctor's or other health care provider's office. An EHR may include your medical history, notes, and other information about your health including your symptoms, diagnoses, medications, lab results, vital signs, immunizations, and reports from diagnostic tests such as x-rays. Providers are working with other doctors, hospitals, and health plans to find ways to share that information. The information in EHRs can be shared with other organizations involved in your care if the computer systems are set up to talk to each other. Information in these records should only be shared for purposes authorized by law or by you. You have privacy rights whether your information is stored as a paper record or stored in an electronic form. The same federal laws that already protect your health information also apply to information in EHRs.
